An Overview of 11 Natural Therapies to Conquer Cancer

By Robert Sopias

This special report shows you how you can win the fight against cancer...

Diagnosed With Cancer?

Here Are 11 Effective, Natural Strategies To Kill Your Cancer

The information you need to beat cancer is here. In this report you will find information your doctor can't tell you or doesn't know - including information on one product, where 51 out of 65 stage 4 cancer patients became cancer free while using it. Other readers say that this report gave them the most understandable information they found about cancer. You'll learn about the underlying causes of cancer, and what to do to counteract those causes as well as effective actions to take to defeat cancer.

This information applies to all types of cancer. Lung, prostate, breast, colon, ovarian, cervical, liver, pancreatic, bone, bladder, stomach, testicular, thyroid, kidney, throat, brain, mouth, uterine, esophageal, rectal and more. The fundamental causes of these cancers are the same, so the same strategies work for all of them.

Thousands before you have used these strategies to beat their cancer and now live happy normal lives. They are available here at no cost to you.

"In 2003 my husband was told he had a pancost tumor on his upper left lung. He began 6 weeks of chemotherapy and radiation therapy. On April 1st, 2004 he went thru a 10 hour surgery to remove the upper left lobe, parts of his ribs and the tips of the T3, T4 & T5 vertebrae.

"In May 2005 he was informed the cancer had returned in the lower left lung and on his spine causing compression fractures of the C2, T3, 4, 5, & T6 vertebrae. He refused chemo and radiation therapy. We studied the information on your site and began a regiment of detoxing, cleansing, and using several of the products and a complete life style change.

"The recent CT scan, PET scan, blood work and MRI came back cancer free. Thank God. He still has the issue with his back, but no cancer:

We will continue taking the holistic approach using your products.

Just to name a few: Oxy E, MSM, AFA Blue Green Algae, Ellagic Acid with Graviola, and more. Faith and prayer does work cause without it I would not have found you, many thanks. Our future looks brighter.

Thank you..." Patrick and Olga - August 1st, 2005

"Hi- I will never be able thank you enough. 8 months ago my boyfriend, Pete, was given a few months to live- melanoma was spreading rapidly through his body and was proclaimed to have settled in the lymph nodes and liver. "Doctors" wanted to strip his lymph nodes and cut out a section of his liver, and then chemo him, again. I found your website, printed out all the info on cancer, and presented it to Pete. He agreed to follow the advice- he refused conventional treatment, [We are not advising that you refuse conventional treatments.] and immediately began a regiment of supplements to detoxify, cleanse, oxygenate, alkalinize, and support. He also made changes in diet and in mind-set. 8 months later he is free of cancer, as indicated in the recent PET scan! He has energy abound, no longer sleeps half the day, and is looking forward to living instead of preparing to die. Your information is well-presented, logical, factual, and in language a person can understand, AND, it saved a man's life." Leslie R.

Even if you are getting conventional medical treatments, you can safely and greatly improve their effectiveness, and reduce the harm they cause your body, by using the right nutritional supplements...Many people have conquered cancer in just this manner.

Let's start by demystifying cancer because once you understand what causes it, you will know what you need to do to get rid of it. For the full details of exactly what to do, get the e-book 11 Natural Therapies to Conquer Cancer.

The Underlying Causes of Cancer

Cancerous cells are always being created in the body. It's an ongoing process that has gone on for eons. Specific parts of your immune system are designed to seek out and destroy cancer cells.

Cancer has been around as long as mankind, but only in the second half of the 20th century did the number of cancer cases explode.

Contributing to this explosion are the excessive amounts of toxins and pollutants we are exposed to, high stress lifestyles that zap the immune system, poor quality junk food that's full of pesticides, irradiated and now genetically modified, pathogens, electromagnetic stress, lights, and just about everything that wasn't here 200 years ago. All these weaken the immune system, and alter the internal environment in the body to an environment that promotes the growth of cancer.

Cancer is not a mysterious disease that suddenly attacks you out of the blue, something that you can't do anything about. It has definite causes that you can correct if your body has enough time, and if you take action to change the internal environment to one that creates health, not cancer, while at the same time attacking cancerous cells and tumors by exploiting their weaknesses.

Cancer tumors begin when more cancerous cells are being created than an overworked, depleted immune system can destroy.

Constant exposure to tens of thousands of manmade chemicals from birth onward, chlorinated and fluoridated water, electromagnetic radiation, pesticides and other toxins, leads to the creation of too many free radicals and excessive numbers of cancerous cells.

Alone this would be enough to raise cancer levels, but combined with an immune system weakened by a diet of refined and over processed food, mineral depleted soils, and too much exposure to artificial light at night, the immune system at some point no longer is able to keep cancer in check, and it starts to grow in your body.

DID YOU KNOW? Research shows that the immune system needs 9 1/2 hours of sleep in total darkness to recharge completely -- the authors of the book *Lights Out* explain.

When was the last time you had this much sleep?

Because of this stress and the overload of toxins, you end up with a malfunctioning immune system, and a body that is not capable of destroying the excessive numbers of cancerous cells that develop. Some, sooner or later, survive and multiply. And then you have cancer. Of course, diets loaded with sugar and refined carbohydrates don't help.

Refined carbohydrates digest so fast they act like sugar, and cancer cells love sugar. They have about 8 times more receptor cells for capturing sugar than healthy cells so eating sugar or refined carbohydrates feeds your cancer.

Overcoming cancer is a process of reversing the conditions that allowed the cancer to develop, while going after and killing cancerous cells.

The exact causes don't have to be known, though certainly the more varied the approaches taken to correct those conditions, the more likely you are going to hit on what works best in a particular case. What you need to do is to strongly and dramatically interrupt and reverse the cancer-causing conditions in your body so that it becomes healthier, and stops breeding cancer.

The more cancer there is, the more serious the condition -- meaning much more has to be done -- fast. It may be too late, or it may not. No one knows where that cut off point is as sometimes people given only a few days to live have pulled through and conquered cancer when they applied these strategies.

The information in the e-book *11 Natural Therapies To Conquer Cancer* isn't about a single medical cure for cancer. It isn't medical advice. It is sort of like information from the National Cancer Society that one of the most important things you can do for your health is to eat five servings of fruits and vegetables a day. In this case though, you will learn about food supplements, minerals and energetic therapies that are much more potent. Able to wipe out any and all of the cancer cells in your body.

There is an overwhelming number of ways and supplements that have helped people overcome cancer. Many therapies are good and help a small percentage of users. A few are excellent and fewer still are great. In *11 Natural Therapies To Conquer Cancer* we help you focus on the very best cancer fighters so that you don't waste your time and money, and possibly your life, on therapies that aren't potent enough to beat your cancer. In this free report you are reading now, we will briefly cover the 11 most important strategies to use when fighting cancer. The e-book gives you the specifics and even rates therapies in order of importance. So let's get started with one of the most basic of therapies.

Cancer Strategy #1:

Kill Cancer Cells... Without Harming Your Body

When chemotherapy and radiation therapy are used to kill the cancerous cells, they harm healthy cells in the process. In fact, they sometimes kill people faster than the cancer would have done. This report focuses on natural supplements that do a good job of killing cancerous cells, but don't cause harm to your body. A few natural supplements suggested for fighting cancer do have the potential to be toxic to the body, and should probably just be used in conjunction with a naturopath or alternative doctor. These include cesium, artemisia, and B17. In this report you will learn only about completely safe cancer supplements that can be used with no supervision.

You may well ask why, if a safe and natural product is able to kill cancer, doesn't your doctor recommend it. Of course, he probably doesn't know about it, but even if he did, he's not likely to use it.

It's the nature of the medical/drug industry. Doctors use and recommend drugs that are approved in a process that costs hundreds of millions of dollars. The drug companies only make drugs that can be patented. That way they can sell them for huge mark-ups and have no competition. Unfortunately, anything that has been altered from nature, which it must be to be patented, becomes a toxic substance in your body. Your body can handle natural foods and herbs, the altered ones have toxic side-effects and just don't work well in your body. It's why the biggest cause of deaths in the US is from medical drugs.

No company would ever take an unpatentable natural product through the drug approval process, so the healthy natural supplements aren't approved to be used for cancer or whatever other health condition they may help. As they are not approved, doctors, or at least most doctors, won't use them, and most don't even know about them.

If a doctor is not tied in and blinded by the medical/drug industry, he or she finds that a comprehensive approach to fighting cancer using powerful supplements that deal with the many different issues in cancer, works much better than only using drugs and other treatments that harm the body. But for now you have to turn to other resources to find safe cancer killers.

In this section, you will learn about the most effective cancer killer this author has seen. Better still, while there are many versions of this cancer killing volcanic mineral, you will learn in our e-book which one goes way beyond the others in healing power. And we give you one other new and unique product that you've never heard of before - easy to take - that is one of the best cancer killers we have seen - though not quite as good as our first recommendation.

Cancer Strategy #2:

Low Levels Of Cellular Oxygen Breed Cancer...

Increasing Oxygen Levels Kills Cancerous Cells

An underlying cause of cancer is low cellular oxygenation levels. In newly formed cells, low levels of oxygen damage respiration enzymes so that they cells cannot produce energy using oxygen. These cells can then turn cancerous.

In 1931 Dr. Warburg won his first Nobel Prize for proving cancer is caused by a lack of oxygen respiration in cells. He stated in an article titled *The Prime Cause and Prevention of Cancer* that "the cause of cancer is no longer a mystery, we know it occurs whenever any cell is denied 60% of its oxygen requirements."

"Cancer, above all other diseases, has countless secondary causes.

But, even for cancer, there is only one prime cause. Summarized in a few words, the prime cause of cancer is the replacement of the respiration of oxygen in normal body cells by a fermentation of sugar. All normal body cells meet their energy needs by respiration of oxygen, whereas cancer cells meet their energy needs in great part by fermentation. All normal body cells are thus obligate aerobes, whereas all cancer cells are partial anaerobes."

Poor oxygenation comes from a buildup of carcinogens and other toxins within and around cells, which blocks and then damages the cellular oxygen respiration mechanism. Clumping up of red blood cells slows down the bloodstream, and restricts flow into capillaries. This also causes poor oxygenation. Even lack of the proper building blocks for cell walls, essential fatty acids, restricts oxygen exchange.

(This is why the flax oil in cottage cheese treatment popular in Europe - 2 tablespoons of organic, refrigerated flax oil or freshly ground flax seed mixed in some cottage cheese - has become a well known cancer treatment. It provides essential fatty acids needed by cell walls so that oxygen can enter the cells.)

What Warburg and other scientists found was that respiratory enzymes in cells, which make energy aerobically using oxygen, die when cellular oxygen levels drop.

When this happens, the cell can no longer produce energy aerobically.

So, if the cell is to live, it must, at least partially, ferment sugars, producing energy anaerobically.

According to Warburg, cells that produce energy by fermenting sugars may turn cancerous. Warburg's contention is this...

The cells that cannot produce energy aerobically, cannot produce enough energy to maintain their ability to function properly. So they lose their ability to do whatever they need to do in the body.

Fermentation allows these cells to survive, but they can no longer perform any functions in the body or communicate effectively with the body. Consequently, these cells can only multiply and grow. And may become cancerous. Or perhaps it would be more accurate to say, they change into cancer cells.

Decades ago, two researchers at the National Cancer Institute, Dean Burn and Mark Woods, (Dean translated some of Warburg's speeches) conducted a series of experiments where they measured the fermentation rate of cancers that grew at different speeds. What they found supported Dr. Warburg's theory. The cancers with the highest growth rates had the highest fermentation rates. The slower a cancer grew, the less it used fermentation to produce energy.

Naturally Warburg's contention was challenged and tested by other scientists. Some researchers claimed his theory was not valid after they had measured a particularly slow growing cancer, and found no fermentation at all. And if cancer could grow with no fermentation, then fermentation, or lack of oxygen respiration, was not the cause of cancer. Dean Burn and Mark Woods checked those results. Using more sophisticated equipment, they determined that the equipment these researchers used to measure fermentation levels was not accurate enough to detect fermentation at low levels. Their testing, using newer and more accurate equipment, showed that even in those very slow growing cancer cells, fermentation was still taking place, at very low levels.

Pietro Gullino, also at the National Cancer Institute, devised a test which showed that this slow growing cancer always produced fermentation lactic acid. Silvio Fiala, a biochemist

from the University of Southern California, also confirmed that this slow growing cancer produced lactic acid, and that its oxygen respiration was reduced.

Further research into Warburg's theory showed that when oxygen levels were turned down, cells began to produce energy anaerobically. They ultimately became cancerous when levels went low enough. It took a reduction of 35% in oxygen levels for this to happen.

J. B. Kizer, a biochemist and physicist at Gungnir Research in Portsmouth, Ohio explains, "Since Warburg's discovery, this difference in respiration has remained the most fundamental (and some say, only) physiological difference consistently found between normal and cancer cells. Using cell culture studies, I decided to examine the differential responses of normal and cancer cells to changes in the oxygen environment.

"The results that I found were rather remarkable. I found that... "High O₂ tensions were lethal to cancer tissue, 95 percent being very toxic, whereas in general, normal tissues were not harmed by high oxygen tensions. Indeed, some normal tissues were found to require high O₂ tensions. It does seem to demonstrate the possibility that if the O₂ tensions in cancer tissues can be elevated, then the cancer tissue may be able to be killed selectively, as it seems that the cancer cells are incapable of handling the O₂ in a high O₂ environment."

Low oxygen levels in cells may be a fundamental cause of cancer. There are several reasons cells become poorly oxygenated. An overload of toxins clogging up the cells, poor quality cell walls that don't allow nutrients into the cells, the lack of nutrients needed for respiration, poor circulation and perhaps even low levels of oxygen in the air we breathe.

Cancer cells produce excess lactic acid as they ferment energy. Lactic acid is toxic, and tends to prevent the transport of oxygen into neighboring normal cells. Over time as these cells replicate, the cancer may spread if not destroyed by the immune system.

Chemotherapy and radiation are used because cancer cells are weaker than normal cells and therefore may die first.

However, chemo and radiation damage respiratory enzymes in healthy cells, and overload them with toxins, so they become more likely to develop into cancer. The underlying cancer causing conditions are worsened, not improved. And the cancer usually returns quickly a second time unless you make changes to support the health of your body.

The implication of this research is that an effective way to support the body's fight against cancer would be to get as much oxygen as you can into healthy cells, and improving their ability to utilize oxygen. Raising the oxygen levels of normal cells would help prevent them from becoming cancerous.

And increasing oxygen levels in cancer cells to high levels could help kill those cancer cells.

A nurse who works in medical research said, "It's so simple. I don't know why I never thought of it before. When we're working with cell cultures in the lab, if we want the cells to mutate, we turn down the oxygen. To stop them, we turn the oxygen back up."

Ma Lan, MD and Joel Wallach DVD, point out that one type of white blood cells kills cancer cells by injecting oxygen creating hydrogen peroxide into the cells.

It is not easy to get additional oxygen into cells. Most approaches don't work well. Breathing oxygen is still limited by the amount of hemoglobin available, and pH levels. Dr. Whittaker points out, quite rightly, that liquid oxygen supplements that release oxygen into the blood, which most of them only do, can't get oxygen into the cells. He explains that a delivery mechanism is needed to transport oxygen into cells. And though the typical oxygen supplement gets oxygen into the blood, that doesn't mean it gets into the cells.

So what can you do to increase oxygen levels in your cells? The 11 Natural Therapies to Conquer Cancer e-book gives you not one, but two supplements that have the ability to get more oxygen into your cells.

There is a bit more to this oxygenation story.

If you remember, according to Warburg, it is increased amounts of carcinogens, toxicity and pollution that cause cells to be unable to uptake oxygen efficiently. This is connected with over-acidity.

Cancer Strategy #3:

Acidic pH Levels Lead To Cancer...

Normalizing pH Levels Can Stop Cancer In Its Tracks

There is plenty of research showing that cancer thrives in an acidic environment, and doesn't survive in a normal, more alkaline environment. Cancer cells make your body even more acidic as they produce lactic acid. So if you have cancer, your pH levels are low and your body is too acidic.

Taking action to make your body more alkaline is vital in the battle against cancer. Unfortunately...

The majority of the foods and drinks we consume are acidic, such as meat, grains and sugar, with colas and other soft drinks being highly acidic. So unless you have been eating a very healthy diet, full of fresh fruit and vegetables, your body is way too acidic. Creating a very good environment for cancer to grow in.

Actually, too much acidity is an underlying factor in many degenerative diseases -- diabetes, arthritis, fibromyalgia and more. A basic maxim of natural physicians is: Balance the bio terrain. Do this first, then everything can come back to normal. Taking medicines or supplements while your body is highly acidic is a bit like washing dishes in a sink of dirty water, even when you put in plenty of soap, you can't get the dishes clean.

According to Keiichi Morishita in his book, *Hidden Truth of Cancer*, when your blood starts to become acidic, your body deposits acidic substances in the blood (usually toxins) into cells to allow the blood to remain slightly alkaline. However, this causes your cells to become more acidic and toxic, which results in a decrease of their oxygen levels, and harms their DNA and respiratory enzymes.

Over time, he theorizes, these cells increase in acidity and some die. These dead cells themselves turn into acids. However, some of these acidified cells may adapt in that environment. In other words, instead of dying - as normal cells do in an acid environment - some cells survive by becoming abnormal cells.

These abnormal cells are called malignant cells. Malignant cells do not correspond with brain function nor with our own DNA memory code.

Therefore, malignant cells grow indefinitely and without order. This is cancer.

As you can see, he is describing, from a different point of view, the process by which low oxygen levels turn some cells cancerous. Alkaline water (including the water in cells) holds a lot of oxygen. Acidic water holds very little oxygen. So the more acidic your cells are, the less oxygenated they will be. To make matters worse, the fermentation process cancer cells use to produce energy creates lactic acid, further increasing acidity and reducing oxygen levels.

Sang Whang, in his book *Reverse Aging*, points out that toxins are acidic. If your blood is too acidic, toxins will not be released from your cells into the blood. So your cells can't be detoxified. This buildup of toxins in your cells results in acidic, poorly oxygenated cells, which can turn cancerous. He explains,

"In general, degenerative diseases are the result of acid waste buildups within us. When we are born, we have the highest alkaline mineral concentration and also the highest body pH. From that point on, the normal process of life is to gradually acidify. That is why these degenerative diseases do not occur when you are young. Reverse aging requires two separate steps: chemical and physical. The first step is to lower the acidity of the body so that it can dispose of acidic wastes in the blood and cellular fluids safely and easily. The second step is to physically pull out old stored wastes into the blood stream so that they can be discharged from the body."

There is a long history of reversing cancer simply by alkalizing the body. It is one of the basic strategies in the battle against cancer, and for improving your health in general. Not only does the e-book tell you what cancer killing and oxygenating supplements will also boost your alkalinity, without having to spend a penny more for pH adjusting products, but you will read about a super way to raise your pH levels for only a penny or two a day. This information alone will more than cover the cost of the e-book.

Cancer Strategy #4:

Lack Of Methylglyoxal Causes Cancer...

Getting Methylglyoxal Into Cells Puts The Brakes On Cancer

Dr. Albert Szent-Gyorgyi was the Nobel Laureate in Medicine in 1937 for the isolation and discovery of Vitamin C. Known as the "Father of Nutritional Science", he also discovered iso-flavones and vitamin P.

In his last 40 years, he researched the regulatory processes of cell growth, and thereby the regulation of cancer itself.

He made a rather amazing breakthrough about cancer. In 1963 the prestigious magazine "Science" published a remarkable article about his research. In it Dr. Szent-Gyorgyi identified two substances, one called Retine, which inhibited cancer growth, and the other called Promine, which promoted cell growth and made cancerous cells grow faster.

He explained that these were very small molecules that were highly potent in controlling cell division. His research using mice achieved shrinkage of tumors by increasing the ratio of Retine to Promine with daily injections of Retine. Other researchers obtained similar results.

There were no harmful or toxic side effects.

In another "Science" article in 1967 he announced that his laboratory had isolated and manufactured Retine, which retards cell growth, in the form of a Carbonyl compound called Methylglyoxal.

Again, in animal studies he showed that injecting Methylglyoxal daily into mice with cancer was highly effective. The study was divided up into 5 groups of 20 mice each. Every mouse in the control group died in the first 26 - 34 days. All mice were observed for 300 days. The first group began treatment 1 hour after inoculation with cancer. 15 survived.

In the second group, beginning treatment 4 hours after inoculation, 13 animals survived. The third group began treatment 24 hours afterwards and 7 survived. The fourth group waited 48 hours and 4 survived.

In an interview in Prevention magazine in 1972 conducted by Jane

Kinderlehrer, he explained that he and "Dr. Egyud have found that retine (methylglyoxal) stops the growth of cancer cells without poisoning other cells. When retine is present in sufficient concentration, no cell division can occur while vital cellular processes go on unhindered."

The article goes on, "And what is a good bit of luck, and not my cleverness, the white-haired scientist pointed out, "is that if a cancer cell cannot grow, it dies by itself."

According to the researchers, retine is normally produced by the body and, when it is, it prevents the growth of existing cancer cells. But the body can lose its ability to produce this substance...

"Putting the retine back in the body, just as we put insulin back into a diabetic's body, can stop the growth of cancer... The scientists at Woods Hole found that cancer cells are much more sensitive to retine than normal ones, and so cancer cells may be inhibited specifically."

To sum it up, the Carbonyl group - Glyoxal & Methylglyoxal, are retine. They arrest cell division and make cells return to a resting state. If Carbonyl is missing, uncontrolled proliferation goes on, and cells grow wildly and uncontrollably which leads to cancer. Glyoxal & Methylglyoxal are a non-toxic substance that is supposed to be in your cells. Putting them back in your cells has significant anti-cancer activity.

Another well known Nobel Prize winner of that period, Dr. William Koch, worked on this same issue with a different approach. Dr. Szent-

Gyorgyi acknowledged his work saying, "A decade ago, a very intuitive researcher, Dr. William F. Koch, came to the same conclusion about the possible importance of Carbonyls in regulation of cell division and carcinostasis."

While both work best when used together, one of these two supplements is a much stronger cancer killer than the other. The 11 Natural Therapies to Conquer Cancer e-book will tell you which one is the most important to use, and give you its only source.

Cancer Strategy #5:

A Weakened Immune System Leads To Cancer

A Strong Immune System Seeks Out And Destroys Cancer Cells

For most of your life, the immune system has successfully dealt with cancer cells, killing them off as they developed. That's its job. For cancer to have developed in you, your immune system must have become worn out, ineffective and unable to deal with the cancer cells.

Thus it is vital to strengthen the immune system so that it can better fight cancer. Especially if you are getting medical treatments that wipe out the immune system, and make the body more acidic to boot.

Many natural supplements support the immune system. The trick is to find and use the ones that work the best, as it is easy to squander resources on products that won't get the job done. The other concern is to make sure you take enough. Cancer is not something to pussyfoot around with. Taking 5 to 10 times the normal supplemental amount seems to work best when using natural supplements.

The 11 Natural Therapies e-book gives you seven or eight of the best immune system boosters, and even tells you which are the most important ones to use first.

Cancer Strategy #6:

Candida And Fungal Infections May Cause Cancer...

Eliminating These Fungal Infections Is Vital For Getting Rid Of Cancer

Some doctors theorize that candida or other systemic fungal infections cause or at the very least contribute to the development of cancer. This makes sense. A body wide candida infection plays havoc on the immune system. Not only does the immune system become overwhelmed and worn out from fighting the infection, but candida (or other fungus) excrete toxins that further weaken and harm the body.

The major waste product of candida is acetaldehyde, which produces ethanol. Ethanol may be great in cars, but in your body it causes excessive fatigue, and reduces strength and stamina. In addition, it destroys enzymes needed for cell energy, and causes the release of free radicals that can damage DNA.

Ethanol also inhibits the absorption of iron. Because iron is one of the most important oxygen supports in the blood, ethanol in your body creates low oxygen levels. And you know what happens when your body can't oxygenate well. Deal with candida if you want to beat cancer.

Some doctors implicate fungi as a cause of leukemia. In 1999 Meinolf Karthaus, MD, watched three different children with leukemia suddenly go into remission upon receiving a triple antifungal drug cocktail for their "secondary" fungal infections. In 1997 Mark Bielski stated that leukemia, whether acute or chronic, is intimately associated with the yeast, *Candida albicans*, which mutates into a fungal form when it overgrows.

Milton White, MD. believed that cancer is a chronic, infectious, fungus disease. He was able to find fungal spores in every sample of cancer tissue he studied. Other doctors feel the same. The cancer fighting strategy one Italian MD uses is to attack the candida by alkalizing the digestive tract. He has his patients drink a teaspoon of bicarbonate of soda, baking soda, in a glass of water 30 minutes before breakfast. Some of his patients eliminate their cancer just doing this. We suggest using at least 3 teaspoons a day, and have heard of people using as much as 10 teaspoons being used daily in 5 quarts of water.

Author Doug Kaufmann asserts that fungi in foods may play a role in cancer. He has seen children become free of their documented leukemia once the child's parents simply changed the child's diet. Kaufmann's diet is based on the widely published problem of mycotoxin contamination of our grain foods.

Grains such as corn, wheat, barley, sorghum, and other foods such as peanuts, are commonly contaminated with cancer-causing fungal poisons called mycotoxins. One of them, called aflatoxin, just happens to be the most carcinogenic substance on earth.

He says we consume, on average, from 0.15mg to 0.5mg of aflatoxin per day. So it is not sugar alone that is the problem in our western diet, but fungal toxins that are found in the sugary grains. More than once has Kaufmann interviewed a caller (on his health talk show) who absolutely craved peanut butter and popcorn just prior to their diagnosis of cancer.

Kaufmann feels that antibiotics may play a role in this. Antibiotics destroy the normal, protective gut bacteria, allowing intestinal yeast and fungi to grow unchecked. Resulting in Candida overgrowth. This can lead to immune suppression, symptoms of autoimmune diseases, or even cancer.

"If the onset of any symptom or disease, cancer included, was preceded by a course of antibiotics," he says, "then look for a fungus to be at the root of your problem."

In the 11 Natural Therapies e-book you will read about a simple and free test you can give yourself to see if indeed you have candida overgrowth. And then learn what is the single best product to fight the candida. (It will help kill cancer cells too!)

Cancer Strategy #7:

Toxins (Genetically Modified Foods & Chlorine) Cause Cancer...

Reducing Toxic Overload Vital For Eliminating Cancer

An eminent German oncologist says that cancer is caused by environmental toxins. Others agree. While there are obviously other issues, fungus, viruses, genetics, etc., the major change in the world that could have led to the explosion of cancer over the last 100 years has been the introduction of tens of thousands of chemicals into the environment. Chemicals that we had never been exposed to before. Ones that our bodies don't know how to handle.

They overwhelm the defenses of your body and cancer develops. Unfortunately, if industry and the government they control have their way, it may even become worse.

Biotech companies have been aggressively promoting the use of genetically modified food. It's a financial goldmine for them.

Unfortunately, there are several problems with genetically modified food. Even the scientists at the FDA resisted them till political pressure from the top approved it. Every independent study has shown problems with the eating of genetically modified food. Abnormal cell growth being high on the list. And no wonder.

Jeffrey Smith, author of *Seeds of Deception* writes on SeedsOfDeception.com: "More worrisome is that the "promoter" used inside GM foods could get transferred to bacteria or internal organs. Promoters act like a light switches, permanently turning on genes that might otherwise be switched off. Scientists believe that this might create unpredictable health effects, including the potentially pre-cancerous cell growth found in the animal feeding studies mentioned above.

"Milk from rbGH-treated cows contains an increased amount of the hormone IGF-1, which is one of the highest risk factors associated with breast and prostate cancer, among others. Soy allergies skyrocketed by 50% in the UK, coinciding with the introduction of GM soy imports from the U.S."

Foods are not required to be labeled as GM foods. The only way to make sure you are not eating food that has been genetically modified is to eat organic food or food labeled non-gmo. Eating organic food will also reduce the amount of chemicals you are ingesting.

Types of toxins in your body

There are several types of toxic buildups in the body that need to be dealt with when fighting cancer. First there is cellular toxicity caused by the shunting of toxins into cells due to excess acidity in the blood, and the inability to release toxins in the cells for that very same reason.

Next is heavy metal and chemical toxicity coming from years of exposure to highly toxic heavy metals and chemicals. While many come from the environment, silver amalgam fillings, many vaccines and some other drugs put mercury and other toxins into our body. Most large fish have elevated mercury levels. Elevated levels of heavy metals disrupt the immune system, and must be dealt with when fighting cancer.

And then there is the toxic buildup in the colon of undigested foods and hardened fecal matter. Nutrient absorption is disrupted, and toxins sitting in that decaying mess are reabsorbed back into the body. This creates a constant stress on the immune system, and a further load on the body's detoxification systems. Colon cleaning needs to happen on the journey to good health.

The Chlorinated Water and Cancer Connection

Pathogens in water have led to many diseases. But did you know that what's put in your water to purify it may be causing your cancer (and heart disease)?

The French, with their lower cancer rates from consuming OPCs and resveratrol in red wine, have made red wine famous for its health benefits. There is another side to their lower cancer rates that most people don't know...

The French do not drink chlorinated water. They ozonate their water to purify it.

Does this make a difference? Absolutely.

"We are quite convinced... that there is an association between cancer and chlorinated water." Medical College Of Wisconsin research team. We don't use chlorine because it's

safe, we use it because it is cheap. We essentially still pour bleach in our water before we drink it. The long-term effects of chlorinated drinking water are disastrous.

According to the U.S. Council Of Environmental Quality, "Cancer risk among people drinking chlorinated water is 93% higher than among those whose water does not contain chlorine."

It may cause much heart disease too. Dr. Joseph Price wrote a highly controversial book in the late sixties titled *Coronaries/Cholesterol/Chlorine*, and concluded that nothing can negate the incontrovertible fact, that the basic cause of arteriosclerosis, heart attacks and stroke, is chlorine.

Dr. Price later headed up a study using chickens as test subjects, where two groups of several hundred birds were observed throughout their span to maturity. One group was given water with chlorine and the other without. The group raised with chlorine, when autopsied, showed some level of heart or circulatory disease in every specimen, the group without had no incidence of disease. The group without chlorine grew faster, larger and displayed vigorous health.

This study was well received in the poultry industry, and is still used as a reference today. As a result, most large poultry producers use dechlorinated water.

When chlorine is added to our water, it combines with other natural compounds to form Trihalomethanes (chlorination byproducts), or THMs.

These chlorine byproducts trigger the production of free radicals in the body, causing cell damage, and are highly carcinogenic.

"Although concentrations of these carcinogens (THMs) are low, it is precisely these low levels that cancer scientists believe are responsible for the majority of human cancers in the United States". The Environmental Defense Fund

Dr. Robert Carlson, a highly respected University of Minnesota researcher, sums it up by claiming, "Chlorine is the greatestcripler and killer of modern times!"

Breast cancer, which now affects one in every eight women in North America, has recently been linked to the accumulation of chlorine compounds in the breast tissue. A study carried out in Hartford Connecticut, the first of it's kind in North America, found

that: "Women with breast cancer have 50% to 60% higher levels of organochlorines (chlorination byproducts) in their breast tissue than women without breast cancer."

It is not just drinking chlorinated water that is the problem.

Up to two thirds of our exposure to chlorine is due to inhalation of steam and skin absorption while showering. A warm shower opens up the pores of the skin and allows for accelerated absorption of chlorine and other chemicals in water.

The steam we inhale while showering can contain up to 50 times the level of chemicals than tap water due to the fact that chlorine and most other contaminants vaporize much faster and at a lower temperature than water. Inhalation is a much more harmful means of exposure since the chlorine gas (chloroform) we inhale goes directly into our blood stream.

"Showering is suspected as the primary cause of elevated levels of chloroform in nearly every home because of chlorine in the water."

Dr Lance Wallace, U.S. Environmental Protection Agency.

If you take showers using chlorinated water and are dealing with cancer, clearly installing a shower filter to dechlorinate your shower water makes good sense.

Other Toxin Sources

In the process of eliminating as much toxic exposure as possible, you need to limit exposure from the chemicals in your carpets and walls of your home. Unless you've already taken special efforts to have a chemical free house, formaldehyde and many other chemicals have been outgassing toxic fumes in yours for years. Hulda Clark, in her books on fighting cancer and other diseases, recommends that all carpeting be pulled up, paneling and walls taken out and replaced, and so on - if you want to beat cancer. Pretty drastic stuff. A less overwhelming solution would be to get a photo catalysis air cleaner. Using technology developed by NASA, it puts out molecules that interact with VOC's, the chemicals put out by carpets, etc. and changes them into harmless carbon and water molecules.

Personal care items like shampoo, conditioner, or skin lotion often contain ingredients that add to the overburden of chemicals your immune system must get rid of. Try to use

as natural and pure personal care items with as few chemicals listed in the ingredients as possible to reduce that overload. The less overwhelmed your immune system is, the better it can fight the cancer.

The buildup of toxins in your body reduces cell oxygenation and toxins will damage DNA, causing cell mutation. The key is to protect your cells by making sure you are taking plenty of antioxidants, stop drinking chlorinated water or taking showers in it, and get rid of the buildup of toxins in your body using safe and natural detoxifiers.

There are three types of detoxification to be done, cellular detoxification, intestinal detoxification and a more general body detoxification in which we will include heavy metal detoxification. There is some crossover here, any detoxifier will work in more than one way. And remember, it is very important to alkalinize the body as that must happen before a great deal of detoxification can be done.

You will learn in the e-book which cancer killers also detoxify heavy metals so you can do both with just one product. And what supplements you may need to take to support your detoxification organs when you start killing off the cancer. Cancer cells alone are highly toxic and will overload your detoxification organs, especially if you've had or are having chemotherapy too.

Cancer Strategy #8:

Free Radicals Promote Cancer By Damaging DNA...

Free Radical Scavengers Protect Cells From Damage

One of the causes of cancer is excessive free radical damage in your cells that harms your DNA and results in some cells mutating into cancerous cells. Every chemical and toxin in your body causes free radical damage. The carcinogenic ones cause even more. Combined with high acidity and low oxygenation, you've got a prescription for cancer.

Another reason we have too much free radical damage and too much cancer is that processed foods generate more free radicals than whole foods, and have fewer nutrients to act as free radical scavengers to help protect you from those free radicals. On top of this, you are exposed to 70,000 chemicals -- 20,000 of which are known cancer-causing agents. These all cause free radical damage.

For this strategy, the e-book focuses on a unique free radical scavenger that has the ability to kill cancer cells by increasing the amount of energy the mitochondria on the cancer cell is producing. The cancer cell's energy pathways are shut down because normally they produce very little energy. The extra energy this one of a kind supplement causes the cancer cell's mitochondria to produce cannot be handled by the cancer cell. And causes it to die. It is one of the strongest cancer killers we have seen.

Cancer Strategy #9:

Low Levels Of Enzymes Always Found In Cancer...

Use The Right Enzymes To Kill Cancer Cells

Researchers have noted for years a correspondence between low enzyme levels and cancer. In fact enzyme therapy has been used with good results against cancers in Europe, and by some doctors in the United States. To literally digest cancerous cells.

In the early 1900's a doctor in Wales, John Beard discovered that pancreatic enzymes destroyed cancer cells. Making some brilliant observations, he deduced that cancer cells come from stem cells that become uncontrolled stem cells. He noticed that the fetal pancreas starts working and secreting enzymes at the 56th day of gestation. Fetus' don't digest anything till they are born. Beard wondered why did the pancreas in the fetus start working so early? He noticed that the day the pancreas started producing enzymes was the day the placenta stopped growing. The enzymes stopped this rapid growth.

His theory was that many placental cells remain in our body. When these misplaced placental cells get lost and can start growing, turning cancerous, if you don't have enough pancreatic enzymes. (By the way the medical community thought he was crazy. Now a hundred years later, technology has confirmed there are these cells.)

In 1911 he tested pancreatic enzymes for stopping cancer in mice and it worked. Naturally and unfortunately, he was blackballed and died in obscurity. Decades later Dr. Kelly read about his work, and cured himself of cancer using pancreatic enzymes and started treating and curing many cancer patients using pancreatic enzymes. Dr. Gonzales, sent to investigate Dr. Kelly, liked what he saw so much that he also treats cancer using pancreatic enzymes.

The major reason enzymes levels become depleted is that we eat mostly processed, irradiated and cooked food.

The digestive system was designed to process raw food. Raw food, when it is picked ripe, has enzymes in it that help break down that food in the upper stomach where it sits for 30 to 45 minutes. The enzymes in the food predigest that food. Then in the lower stomach the pancreas excretes more enzymes.

When you eat cooked, irradiated and processed foods, the enzymes have been killed; the food does not predigest in the upper stomach. So when it reaches the lower stomach two things happen. The pancreas must make extra enzymes to try and break down the food.

And often the food is only partially digested.

The pancreas, after decades of overworking, eventually is no longer able to produce an adequate supply of enzymes. So you develop low enzyme levels of all types of enzymes, and your body cannot naturally kill cancerous cells using enzymes.

In addition, food that is not completely digested all too often makes its way into the bloodstream. Especially if you have leaky gut syndrome from candida overgrowth. This partially digested food is treated as a toxin, and the immune system has to get rid of it. This puts an additional strain on the already overworked immune system.

Studies have found that the immune system treats the ingestion of cooked food as a toxic poison, causing a jump in white blood cells in an attempt to get rid of it as fast as possible.

Taking a good quality enzyme supplement with meals, one that has high levels of protease to digest protein, lipase to digest fat, and amylase to digest carbohydrates helps break down food in the upper stomach. So that the pancreas doesn't have to produce extra enzymes. Food is better digested. You also need to take Betaine HCL and the HCL Activator to help break down protein.

Also, it is important to take enzymes on an empty stomach. A stack of research shows that enzymes, when taken in this manner, will go into the bloodstream and clean it up. And in the process may digest and kill cancer cells.

This will also unstick clumpy red blood cells. Sticky, clumped up red blood cell clusters clog up capillaries and reduce circulation. So that cells cannot oxygenate properly. Which as you have gathered by now, contributes to cancer.

Cancer tumors produce a thick fibrin protein to help protect them from the immune system. This also helps to stick the cancer tumor to wherever it is.

Enzymes in the bloodstream can digest and dissolve the fibrin coating. Large amounts of enzymes would need to be taken, and they would need to be enzymes high in protease,

Nattokinase or other fibrin digesting enzymes like Serratiopeptidase to break down the fibrin.

In the 11 Natural Therapies e-book you will learn about a supplement more powerful than these enzymes are at killing cancer cells and digesting fibrin. It will even help you kill candida if you have candida overgrowth.

Cancer Strategy #10:

Energetically Fight Cancer With some of the most powerful cancer fighting supplements we have ever researched...

Conditions that lead to cancer can also be viewed energetically. In fact, low energetic vibrations may well set the stage for the development of cancer. Cancer cells have much lower levels of vibratory subtle energy. For a cell to turn cancerous, its vibratory energy must be low. Raising the energetic level of the body alone has helped some people conquer cancer.

You can raise the vibratory levels of your cells. One way is to drink fluids that have been energized. Liquids vibrate at the rate fluids near them are vibrating. Drinking high-energy water will raise the energetic level of cellular fluids. The higher they are raised, the harder you make it on cancer.

Electromagnetic Fields (EMFs) are another possible cause of cancer.

You are exposed to them by electronic appliances. Cell phones, computer screens and microwaves are among the biggest offenders, but even the clock radio by the side of your bed is putting out unhealthy levels of EMFs for a foot or two. Your car puts out quite a bit of it.

Radiation from cell phones can literally eat holes in your blood brain barrier, which functions to prevent toxins from entering the brain. When it is full of holes, toxins get into brain, causing much damage. A Swedish study has found that heavy users of cell phones had a 240 percent increase in brain tumors on the side of their head that the phone was used on. The study defined 'heavy' use as more than 2,000 total hours, or approximately one hour of use per workday for 10 years.

There are two ways you can deal with EMFs. You can try to avoid exposure to them, or you can wear or use an energized product that counters the effect of that radiation to your body's energy field. For example, you can choose to not use a cell phone or any portable phone, or you can put a good cell phone energy neutralizer on the phone to neutralize the radiation.

Geopathic stress has been implicated by many alternative health practitioners in Europe as a cause of cancer. Simply put, geopathic stress is unhealthy energy coming from the earth. One cause is underground streams that creates friction that produces the wrong type of energy.

Two developers of energized products both had cancer that would not resolve until they were told to check and see if they slept over geopathic stress. They did, changed their sleeping arrangements, and then were able to get well. A study in England noted that gypsies, even though their diets and smoking habits were poor, were not near as likely to get cancer because they were always moving so were not likely to have been sleeping in an area of geopathic stress for years at a time.

The 11 Natural Therapies To Conquer Cancer e-book covers the development and release of some incredibly powerful energetic elixirs in May and June of 2008. You will learn how these energy Elixirs that are proving to be the most powerful healing supplements (and top cancer fighters) that we have found. These are especially important for end stage cancers where you need as much life force as possible to stave off dying.

Cancer Strategy #11:

Psychological Stress Leads To Cancer...

Resolving Stressful Issues Vital For Success Against Cancer

Dr. Hamer, a German oncologist, developed cancer in the late 70s, shortly after his son's untimely death. Theorizing there was a connection between the stress of his son's death and his development of cancer, he began to investigate his cancer patients' histories, and found that they too had experienced an unexpected shock or trauma shortly before their cancer.

Next, he analyzed his patients' brain scans and compared them with the corresponding medical and psychological records. Amazingly, he found a clear correlation between shocks, specific areas of the brain damaged by certain types of shocks, and particular organs where cancer developed depending on the type of trauma.

Based on over 40,000 case studies, over a number of years he developed a theory that every disease originates from a shock or trauma that catches us by surprise. The moment the unexpected conflict occurs, the shock strikes a specific area in the brain causing a lesion (called Hamer Focus), visible on a brain scan as a set of sharp concentric rings in MRI's. The brain cells that receive the impact send a biochemical signal to the corresponding body cells causing the growth of a tumor, a meltdown of tissue or functional loss, depending on which brain layer receives the shock.

He theorized that specific conflicts are tied to specific areas in the brain because, during evolution, brain areas are programmed to respond instantly to conflicts that could threaten survival. For example, let's say that a woman is walking with her child. Suddenly the child runs into the street, and is struck by a car. The moment a mother sees her child injured she suffers a mother-child-worry-conflict, and in a split second the special biological program for this particular type of conflict is switched on.

This always impacts in the brain area that controls the function of the breast glands. This is because, in biological terms, an injured offspring recovers faster when it receives more milk, extra milk production is immediately stimulated by increasing the number of breast gland cells. Even if the woman is not breast feeding, this event is still triggered. As long

as the child is in the hospital, the breast cells will keep dividing and multiplying, forming what is commonly called a glandular breast tumor. When the child recovers, the mother will start to heal. So you correct the problem that is causing the stress, like getting a new job if you have been fired, or a new spouse if there has been a divorce. Or you psychologically learn to deal with the issue so that it no longer is causing stress. Either is vital for healing from cancer. Done in conjunction with conventional treatments, the results have been exceptional.

Dr. Hamer suffered over the years for his controversial theories. One prosecutor pulled his records, and went through patient after patient. Out of 6500 patients with terminal cancer, 6000 were alive. Pretty impressive.

Cancer has many more causes than only being initiated by stressful events. But it does look like they are much more important in initiating cancer than anyone had previously thought. What is undoubtedly true is that stress knocks down the immune system significantly, which could certainly translate into accelerated growth of cancer cells. Continued stress from unresolved traumatic events must inhibit your body's ability to fight cancer.

Fortunately, there are now ways of dealing with, and releasing, events and problems that cause stress which work much faster and more effectively than traditional psychotherapy. One of the best is called the Sedona Method.

What The Medical Industry Won't Tell You About Treating Cancer

There was a woman whose daughter was in the advanced stages of brain cancer. She asked her oncologist if it was okay to give her daughter a superfood called blue green algae. Her doctor told her that it was no problem, that in fact a number of his patients had used that supplement with success in fighting cancer.

Naturally she wondered why he didn't tell her about this product a year before when they came to him.

Unfortunately, he couldn't tell her about this or any "natural or alternative health therapies" and stay employed. Insurance regulations would preclude such suggestions. And he could get into administrative trouble by recommending natural, non-drug treatments for cancer.

His advice is controlled by a large medical industry that makes mega money off expensive cancer fighting drugs and treatments. An industry that doesn't look favorably on natural supplements or other cancer treatments as they cannot patent them to make high profits.

Fifty years from now, the current conventional cancer treatments used by doctors will on the whole be viewed in the same light that we view the old medical practice of using leeches to cure illnesses.

Chemotherapy and other treatments damage cells and tear down and weaken the immune system. But the problem in the first place is that your immune system is already weak, and that your cells are already damaged.

Even if tumors do go into remission, these treatments will have damaged other cells, which are more likely to turn cancerous. The immune system, unless it is supported by supplements and diet to help it recover, will be in worse shape than ever.

While it may have taken decades for cancer to develop the first time around, the second time usually takes a year or two.

Another reason why doctors ignore sensible, safe and healthy treatments for cancer, and recommend costly and illogical treatments instead -- is human nature. They advise and prescribe what they know. Just what we all do.

You go to them and you get what they know. You assume they will do the best they can for you, while in fact they only do what the system teaches them, promotes and allows them to do.

A Doctor's Shocking Closed-Door Confession ...

In a survey of 79 oncologists from McGill University Cancer Center in Canada, 64 said they would not consent to treatment with Cisplatin, a common chemotherapy drug, while 58 oncologists said they would reject all the current trials being carried out by their establishment. Why?

"The ineffectiveness of chemotherapy and its unacceptable degree of toxicity." Philip Day, *Cancer: Why We're Still Dying to Know the Truth*

This information is shocking to say the least. But consider this ...

Doctors today are not very different than they were 150 or 200 years ago. Back then the common practice was for interns and doctors working on cadavers to walk down the hall to deliver a baby without washing their hands. Many women died from the subsequent infections.

Finally a doctor in charge of a clinic figured out what was happening, and had them wash their hands. The infections stopped. When he published his results, the medical profession was outraged. Good doctors could not be the cause of something like this. The doctor was ostracized and fired.

He went elsewhere and repeated the experiment. Again, deaths dropped.

Again he announced the results, and again the medical profession rose up against him. The end of the story was, he lost everything, went insane from the tragedy of it all, and eventually killed himself.

Bottom line: Don't expect a doctor working inside the system to buck the system. The risks are too great.

According to the National Cancer Institute, about 500,000 people will be diagnosed with some form of cancer this year. You may not know it, but cancer -- NOT heart disease -- is the number one risk of death for most everyone.

Chemotherapy works by killing all cells -- throughout your body -- that multiply and divide rapidly.

This would include cancer cells, and other rapidly multiplying and dividing cells, that we need, such as:

- Bone marrow, which produces blood
- Digestive system
- Reproductive system
- Hair follicles

This overkill approach is one of the causes of an astounding overall failure rate of chemotherapy, as you'll see below.

In 2004, the Journal of Clinical Oncology published a study about chemotherapy's success rates when looking at how many cancer patients were still alive after 5 years. It states:

RESULTS: The overall contribution of curative and adjuvant cytotoxic chemotherapy to 5-year survival in adults was estimated to be 2.3% in Australia and 2.1% in the USA.

CONCLUSION: As the 5-year relative survival rate for cancer in Australia is now over 60%, it is clear that cytotoxic chemotherapy only makes a minor contribution to cancer survival. To justify the continued funding and availability of drugs used in cytotoxic chemotherapy, a rigorous evaluation of the cost-effectiveness and impact on quality of life is urgently required.

You'd be hard pressed to find anything still being touted as your best shot at a cure with an average success rate of just over 2 percent, which chemotherapy has, if it wasn't for the fact that big profits were driving the recommendation. For stage 4 cancers the rate is less than half of one percent.

Fundamentally, chemotherapy rarely works. Worse, some drug treatments also promote the spread of cancer. But somehow the rationale to avoid these agents because they might promote cancer does not apply when it comes to drugs.

– A Cancer Journal for the Clinician article concludes by stating:

“ Pending the publication of suitable trials, clinicians must be guided by existing data in the context of a fundamental principle of medicine, "Primum non nocere." (First do no harm.)

And yet, conventional cancer treatments can in no way, shape or form ever be considered harmless.

"...as a chemist trained to interpret data, it is incomprehensible to me that physicians can ignore the clear evidence that chemotherapy does much, much more harm than good."

Alan C Nixon, PhD, former president of the American Chemical Society

It is not all gloom and doom with chemotherapy. For two decades Dr. Perez Garcia has been using a treatment he calls Insulin Potentiation Therapy (IPT). It consists of giving a patient a dose of insulin followed by a tiny dose of chemotherapy.

Cancer cells have 15 times more insulin receptors than normal cells.

The insulin dose helps to target chemotherapy into cancer cells because they have so many more insulin receptors. So small doses of chemotherapy can be used that cause little harm to normal cells. With

Stage 1 or 2 cancer, IPT is, I read, about 80% successful, mixed results for more serious cancers. So after two decades of use, how many doctors were using IPT in the USA? 29. Hard to believe isn't it.

Many oncologists make much of their income from the markup they make on chemotherapy drugs, and small doses don't make big money.

You don't have to avoid chemotherapy or radiation therapy to receive benefits from natural products and supplements. In fact, nutritional supplements are quite useful when used in conjunction with chemotherapy, radiation therapy and surgery. The best ones work to support the body so that radiation and chemo will actually work better. In addition, the immune system will be stronger, and better able to keep cancer from developing again.

It makes sense, doesn't it, to supplement your chemotherapy or radiation treatments with other options that support your body and actually help it be much more effective in fighting cancer.

Many people only do chemotherapy and radiation therapy, and do not also support their body's fight against cancer in other ways. All too often, the cancer is not destroyed, or comes back a short while later.

And no wonder...

If the immune system has been wiped out by chemotherapy or radiation, cancer is bound to overrun the body even faster than before.

Seeking other options after the doctors throw in the towel and say there is nothing else they can do, is necessary. It makes more sense to correct the underlying causes of cancer early on when the odds are much better. Especially with natural supplements that can do no harm.

Natural supplements won't hurt you. They can only help. They won't make chemotherapy or radiation therapy less effective. Instead they amplify the power of whatever cancer treatments you may be doing by attacking cancer in other ways, or supporting the health of the body and immune system. For example, research studies have shown that when you oxygenate cancer cells, radiation therapy is more effective at killing those cells. And beta glucan, when used in conjunction with some types of chemotherapy, produced marked improvement over chemotherapy alone.

Certainly some people beat cancer using chemotherapy or radiation therapy. But look at the number of deaths from cancer, and you see that too many people don't. Not using natural supplements to fight cancer is like being in a life and death struggle, and choosing to fight with one hand tied behind your back.

Hit cancer hard. This is one fight you don't want to lose.

The more support you give your body, the better you will be at handling any possible side effects of chemotherapy and radiation therapy, and the better your body will be at fighting cancer.

A natural approach to cancer is based on making your body healthier. To strengthen a depleted, worn out, under energized immune system that is not capable of killing cancer cells as fast as they are multiplying.

Use safe, natural supplements to change the body's internal environment to one that does not support the growth of cancer, and to directly attack and kill cancer cells. The more cancer there is, the more serious the condition, the more that may need to be done -- fast. It may be too late, or it may not. No one knows where that cutoff point is as people given only a few days to live have pulled through and conquered cancer when they applied these strategies.

The first step to complete and permanent healing is to buy the e-book "11 Natural Therapies to Conquer Cancer".

Not only will you learn more about the causes of cancer and what to do about it, but you will learn the absolute best products to use to fight your cancer. In fact, you will save much more than the cost of this book by learning which products are the most effective products to use. So you won't waste money on products that may not get the job done.

For example, zeolite has proven to be an amazing cancer fighter. So now there are quite a few zeolite products on the market. They all sound good. However, energetically all but one of them test in a range of 40 to 60, the higher the better. This one specially developed zeolite has an energetic healing power of 5000 when I test it, many times stronger than any of the others.

Don't waste your money on (or trust your life to) the less effective supplements.

In addition, you will even learn about cancer treatments that only cost penny's a day.

[Click here](#) to find out more about, and order, 11 Natural Therapies to Conquer Cancer.

If you are not happy with it. If it doesn't teach you the best ways to fight cancer, and the best products to do it with, take advantage of our satisfaction guarantee to get your money back.
